

MAD24-213: An update on DevBoardsForAndroid

Amit Pundir
Sumit Semwal

Unraveling the Age-Old Question

- ❑ "Which device prototype or a development board do you suggest for my XYZ project?"
 - ❑ Got to be one of the most frequently asked question in the embedded world.
- ❑ Embedded Android™ is no different and we run into similar questions around Android development boards all the time.
 - ❑ “What devices support AOSP (Android Open Source Project) reliably, and to what extent?”

In Embedded, One Size Doesn't Fit All!

- ❑ Devboards for an Embedded Android project can be chosen based on a number of factors like
 - ❑ Project requirements and relevance to AOSP
 - ❑ Popularity and Availability of device
 - ❑ **Upstream support**
 - ❑ **Active community and documentation**

Community Interaction and Feedback

- ❑ Introduced the project at [Android MC](#) @ Linux Plumbers Conference '23

Linux Plumbers Conference | Richmond, VA | Nov. 13-15, 2023

Collaborative Community space for AOSP on Devboards

- Overall idea is to provide an umbrella space for collaboration
 - discussions, common HALs, implementation best practices, common scripts/tools
- Helps consolidate everything about "Devboards that work with AOSP"
 - Essential info like: documentation, code, binaries
- Help AOSP-style collaboration for new Devboards and communities
- Confidence boosting about Devboards and AOSP
- Dashboard for build / boot / test run with mainline AOSP

Project DevboardsForAndroid

Introducing <https://devboardsforandroid.linaro.org/>

- ❑ Enabling a community of system developers around the AOSP development boards and devices.
- ❑ An umbrella space for collaboration and consolidation of resources about the devices that are known to support AOSP reliably
 - ❑ Can act as a staging area for devices under development
 - ❑ It will help an end-user choose the right devboard for their project

Salient Features

- ❑ AOSP-style collaboration
 - ❑ [source](#) navigation
 - ❑ [gerrit-based](#) review

- ❑ For each supported device, links are made available to the available resources, like
 - ❑ Kernel source
 - ❑ Local manifest
 - ❑ Device specific configuration files, binary blobs, and
 - ❑ Documentation

Goal

- ❑ We believe this initiative will be instrumental in sharing and co-developing AOSP features like generic HALs across multiple devices
 - ❑ And possibly enable the supported devices with [LAVA](#) (Linaro Automated Validation Architecture) CI in the future.
- ❑ IRC discussion forum at **#aosp-developers** @[OFTC](#)

Project Updates

Devices Supported

Hikey960

- [Hikey960](#)

RB5

- [RB5](#)

RB3 (also known as DB845c)

- [RB3](#)

VIM3

- [VIM3](#)

SM8550-HDK

- [SM8550-HDK](#)

Reference Build Target

- ❑ [linaro_hikey960-userdebug](#) as a reference build target
 - ❑ Cleaned up and removed a few upstream build configs
 - ❑ To continue development and testing on Hikey960 devboard once it hits EOL in AOSP

Staging Area for Development Devices

- ❑ Staging area for upstream focussed devices
 - ❑ [SM8550-HDK](#)
- ❑ Facilitate development of AOSP relevant devices
 - ❑ [E850-96](#)
 - ❑ Pixel 3 [Getting Started]

Staging Area for Upstream Forks & Dev Tools

- ❑ Staging area to host upstream project forks during development stage
 - ❑ For example: [RB3/RB5 U-Boot port](#)
- ❑ Hosting development tools, like
 - ❑ [local_manifest](#) project to clone devboardsforandroid projects
 - ❑ [vendor-package](#) project to host publicly available firmware binaries
 - ❑ [website](#) source to add/update device information

Git repositories on gerrit.devboardsforandroid.linaro.org

Name	Description
All-Projects	Access inherited by all other projects.
device/linaro/dragonboard	AOSP device/linaro/dragonboard fork
device/linaro/hikey960	AOSP fork (linaro_hikey960-userdebug) for Hikey960.
device/linaro/hikey960-kernel	Pre-built Hikey960 kernel binaries for linaro_hikey960-userdebug target
linaro-vendor-package	Vendor package (firmware, bootloader, etc) for Linaro supported devboards
platform/external/u-boot	AOSP external/u-boot fork
platform/manifest	local_manifests for devboardsforandroid projects
testing	testing updating description via web interface
website	website source for devboardsforandroid.linaro.org

Call for participation

- ❑ Join us at **#aosp-developers** IRC channel @ OFTC.net

Thank you
