

Virtio-msg with FFA Demo

This Demo showcases the first users of virtio-msg over FFA: trusty with Android

In this demo, we showcase how virtio-msg over FFA can be used for standardised communication between Trusty TEE in Secure World, and Android AVF Trusty VM in Normal World. This is demonstrated over Qemu.

Glossary

- **Virtio-msg:** A generic transport mechanism that encapsulates virtio operations as discrete message exchanges, designed to be reused with multiple bus implementations.
- **FFA:** Firmware Framework for Arm; defines a protocol for communication between (Secure and non-Secure) Execution Environments
